

USER PERSONA

PROFILE

Name : Ayesha Khan
Gender : Female
Age : 25
Education : Bachelor's in Media Studies
Occupation : Freelance Illustrator
Address : Lahore, Pakistan
Autism Level : Level 2 (needs some support with communication and daily structure)

“Sometimes, I know exactly how I feel... but I just can't explain it in words.”

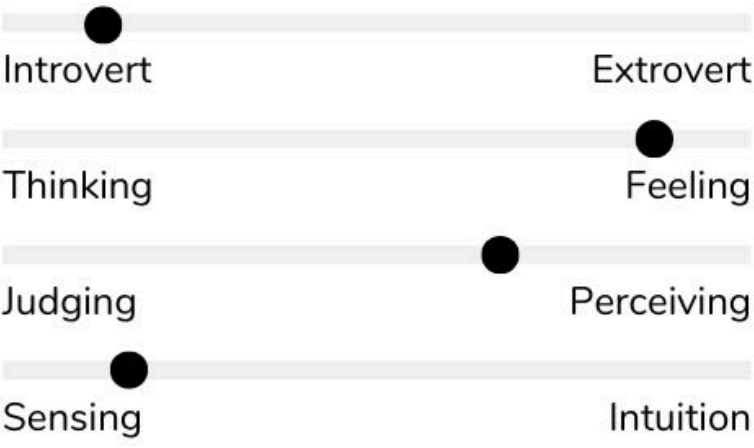

GOALS

- Express emotions without needing complex words
- Reduce emotional meltdowns and anxiety
- Follow a calming, structured daily routine
- Use apps without getting overwhelmed

FRUSTRATIONS

- Gets easily overstimulated by noisy or crowded apps
- Has difficulty explaining feelings in therapy
- Feels misunderstood when her mood changes quickly
- Finds most mental health apps too generic

TECHNOLOGY

USER PERSONA

PROFILE

Name : Dr. Hadi Qureshi
Gender : Male
Age : 32
Education : Phd. in Physiotherapy
Occupation : Therapist (Specializes in Autism Spectrum Disorders)
Address : Islamabad, Pakistan
Clients : Mostly teens and young adults with Autism Level 1 & 2

“Tracking behavior patterns helps me offer the right support. But most tools aren't autism-friendly.”

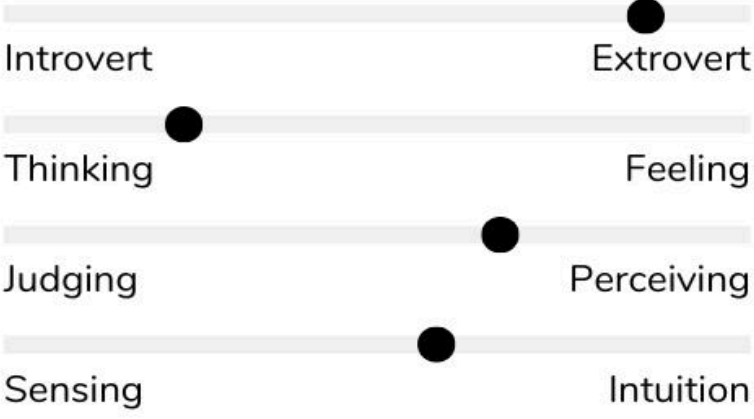

GOALS

- Help clients recognize and manage emotions independently
- Get visual, behavior-based reports for tracking therapy progress
- Recommend calming tools for sensory regulation
- Reduce dependency on verbal-only communication

FRUSTRATIONS

- No centralized, autism-friendly app for emotional tracking
- Clients struggle with daily self-monitoring
- Generic therapy apps don't suit neurodivergent needs
- Parents and caregivers often miss early signs of distress

USER PERSONA

PROFILE

Name : Sadaf Rehman
Gender : Female
Age : 44
Family : Lives with her husband and 19-year-old son, Ayaan, who has Autism Level 1
Occupation : Homemaker
Address : Lahore, Pakistan
Daily Role : Full-time caregiver and emotional support for her son

“I want to understand my child's feelings before things escalate. But he doesn't always tell me what's wrong.”

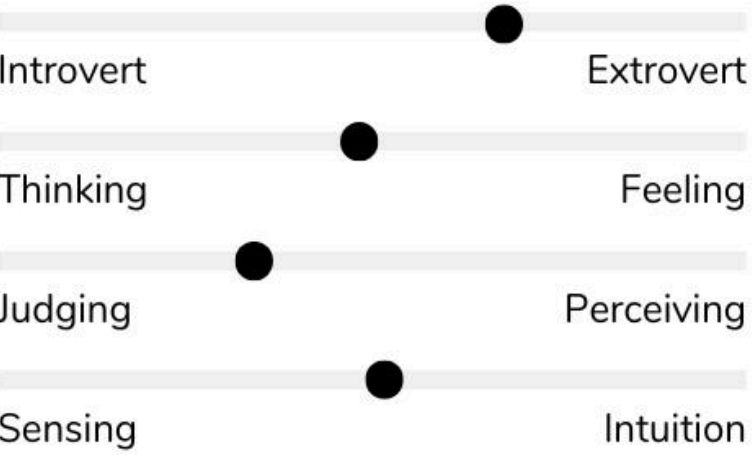

GOALS

- Understand emotional changes in her son before a meltdown
- Use visual cues and mood tracking to support daily communication
- Establish calm, structured daily routines
- Promote independence while still providing care

FRUSTRATIONS

- Her son often shuts down or avoids expressing emotions
- Doesn't always recognize early signs of distress until it's too late
- Most apps are complex and not suited for neurodivergent users
- She lacks guidance on what tools or methods are most effective
